PRELIMINARY QUESTIONNAIRE

Please fill out the concerned areas or answer with "yes" or "no" In the case of illnesses, complains or problems, please add the time, for how long do you suffer of them

First name -> DOUG Last name -> COPP

Date of birth -> AUGUST 3, 1951 Phone -> 1-902-567-1227

Address -> 563 Charlotte St., Sydney, Nova Scotia, Canada, BIP-1E6

Weight kg -> Stones -> lbs/Pounds -> 245 Height cm -> Feet -> 5 Inch -> 10

Your occupation -> RESCUE CHIEF, PERMANENTLY DISABLED FROM WORLD TRADE CENTER

What type of operation you are going to have ->

List here below all past operation you have had, and the type of Anesthesia applied

Type of operation -> Anesthesia -> local/regional/general

1. X None
2.
3.
4.
5.

Occurred complications with one or more of those operations? NO

If yes, indicate the operations and describe the complications

NO X

Did one of your blood-relatives have complications during/after operation (e.g. un-explained death) ?

If yes, indicate the operations and describe the complications

?

How would you describe the frequency of visits to your physician?

Regularly -> [X] Irregularly -> Average visits per year -> 60 EVERY WEEK AT LEAST ONCE

How would you define the state of your health?

Very good -> Rather poor -> Good -> Poor -> Satisfying -> Very bad -> [X]

What are your biggest health complaints?

-> POISONS, TOXIC EXPOSURE, IMMUNE SYSTEM For how long do you suffer of them? -> RESPIRATORY SYSTEM

SINCE, 911 MY SYSTEMS WERE OVERLOADED

Do you suffer from illnesses of the liver? BETTER NO

Do you suffer from illnesses of the kidneys? NOW NO

Do you suffer from headache? HAD CLUSTER HEADACHES YES

Do you suffer from back pain? BROKE 3 PIECES OF BONE FROM SPINE, PARTIALLY PARALYZED LEFT LEG, NEED SURGERY YES

Are you treated by high blood pressure? WAS HIGH, LOWER YES

Do you have varicose veins - phlebitis - thrombosis - embolization? NOW NO

Vein inflammation? I HAVE WEEKLY INTRAVENOUS INJECTIONS FOR HELPING IMMUNE SYSTEM

Have you ever had treatment in oncology? NO

Did you have radiation treatment? NO

Are you treated for thyroid gland problems? TAKE MEDICATION EVERY DAY FOR SLIGHTLY UNDER ACTIVE YES

Do you have prostatic problems? NO

Do you have gastric or duodenal ulcer? ACID REFLUX DISEASE NO

Are you treated for glaucoma? FROM POISONING INFLAMMED NERVOUS SYSTEM YES

Did you lose weight during last year? NO

How much GAINED WEIGHT AFTER POISONING AND UNDERACTIVITY

Are you treated for diabetes mellitus? NO

Diet Insulin Tablets

Have you had a treatment for renal diseases? NO

Infections Nephrolithiasis

Have you had a treatment for hepatic disease? NO

Hepatitis Mononucleosis

Have you ever used hormonal medications? NO

Prednisone Triamc Cortisone

Does someone from your family suffer from the above mentioned illnesses? NO

If yes, who and which illness exactly?

Do you have any other untreated problems?

If yes, which one? NEED TO REMOVE POISONS FROM BODY

Is there any suspicion or possibility of pregnancy? NO

Do you use oral contraceptives? NO

If yes, which one?

Did the complaints recently increase? -> | NO REMAIN SICK BUT IMPROVING.

Have you ever received a blood transfusion? NO NO

How often? -> | 5 OZONE TREATMENTS

Do you have difficulty breathing? YES YES

After climbing stairs? -> | 5 RESPIRATORY DISEASES - IMPROVING

Do you suffer from cough? YES

In the morning? -> | All the time? -> | YES

Do you have feeling of stiffness around the mouth after drinking coffee? SELDOM DRINK COFFEE - REACTION SINCE 91

Do you have loose teeth or removable dentures or bridges? NO

Do you smoke? NO NO

Cigarettes? -> | Cigars? -> | Pipe? -> |

In average, how many a day? -> | In case you stopped smoking, how long have you been a nonsmoker? -> | SEVERE ALLERGIC REACTIONS TO SMOKE -

Do you drink alcoholic beverages? YES

Daily? -> | Sometimes? -> | Occasionally? -> |

How many glasses per day of... Beer -> | 2 WIK Wine -> | 2 WIK Liquor -> | 2

Is your eyesight good? YES BUT ELEVATED PRESSURE

Do you hear well? NO NO

Are you treated for heart disease? NO NO

Infarct/heart attack -> | Heartbeat disturbances -> | Heart weakness -> |

Pain on Chest/Thorax -> | RESPIRATORY Shortness of breath -> | Other -> | NO

Swelling of the legs -> | Arteriosclerosis -> |

Do you suffer from illnesses of lung and bronchi? NO NO

Asthma -> | Emphysema -> | Pulmonary tuberculosis -> |

Pneumonia -> | Inflammations of lung -> | Chest skin -> |

Bronchi -> | Other -> | INFLAMMATION FROM WORLD TRADE CENTER CHEMICALS, COUGHING, YEAST AND FUNGUS FROM SUBWA

Do you suffer from blood illnesses? NO NO

Anemia -> | Thrombosis -> | Emboli -> | Frequent bleedings -> |

Prolonged bleeding after tooth extraction, nose bleeding, after injury -> | NO

Did you suffer from infections? YES YES

TB -> | Frequent angina -> | Typhoid fever -> | Borreliose -> |

WHEN TOXINS ARE MOBILE IN MY BODY -

Are you allergic? YES

Medications -> | Food -> | Pollen -> | Dust -> |

Animals -> | Insects -> |

MANY HUNDREDS OF TOXINS AT ELEVATED LEVELS IN MY BODY, SEE LAB TESTS, LEAD, MERCURY, ANTIMONY, ARSENIC, THALLIUM,

Do you use any medication at the present?

YES

Type of medicine↓	Name/Preparation↓	Dose↓
Sleeping pills	→	→
Anti pain drugs	→ OXYCOTIN	→ RARE - WHEN NEEDED
Cortisone medication	→	→
Digestives	→ PRILLOSEC.	→ DAILEY
Vitamines	→ GLUTATHIONE	→ INJECTIONS/WIC
Other	→ SYNTHROID	→ DAILEY
→	→ ACETAZOLAMIDE	→ DAILEY
→		

Would you like to add more information?

YES

Add here →

MY MAIN CONCERN IS TO REMOVE THE POISONS STORED IN MY FAT & BLOOD, EDTA INJECTIONS WILL THEN REMOVE POISONS IN BRAIN & SKELETAL

Would you like to speak with the anesthesiologist before the operation?

YES

STRUCTURE

I agree with operation using: local - regional - general - anesthesia. I have read and understood all information and advices and I have been instructed about all risks and possible complications. I am able and willing to respect above-mentioned advices.

My phone number is 1-902-567-1227

- 1.- Power assisted Lipoplasty Extension – Can this remove all of the fat?
- 2.- Also, I would like to have my blood completely ozonated before and after the liposuction. Is this possible in Prague? How much?
- 3.- I need microsurgery on my lower spine. Is this possible in Prague?
- 4.- I understand that only 15 pounds can be removed, since, my fat is filled with poison. Can I remove all of the poisoned fat?

If you can call me on Thursday, Jan 13 or Friday Jan 14th then we can schedule times.

On Jan 15th I will be going to Frankfurt. I will be staying with a friend in Frankfurt from Jan 18 to Jan 19th. The phone number is 06128480471 Home

Interpretation

There is a minimal obstructive lung defect. The airway obstruction is confirmed by the decrease in flow rate at peak flow and flow at 25%, 50% and 75% of the flow volume curve. Lung volumes are within normal limits. Diffusion capacity is within normal limits.

FAQ's

Consultation

It is possible to schedule a separate consultation. It is also possible to schedule the consultation shortly before the surge for the convenience of our out of town patients. More information about how to book your appointment ... here

Before& after pictures

At Aesthetia, we leave the decision to use before and after pictures with each of our specialists, because everyone has own opinion as to their value. Every one of our specialists has of course a sufficient number of before & after pictures which are helpful during a personal consultation, regarding specific situations, options and possible results. Today there are pictures which are dispatched en mass over the Net towards prospective patients. There are three reasons why we do find this practice useful:

1. The pictures may not have been posted with the knowledge and agreement of the respective patients.
2. In this electronic age the authenticity of digital photographs is frequently in question, with a resulting loss of confidence on the part of the prospective patient.
3. Besides the two objections above, we think that the evaluation of photographs of former patients should take place during a personal discussion with the specialist, who will reiterate that each case is different, and that results vary depending on a number of factors. The personal individualized consultation with the experienced specialist cannot be substituted for photographs on the Internet.

Individual preliminary analysis

You may send us photographic documentation for an individual preliminary analysis by our doctors and specialists. Usually arranging the preliminary analysis takes 2-3 days. The service is free. However, it is important for the patient to be aware that the findings can still change during the personal consultation. To send pictures we suggest reading our web-page at PHOTO EVALUATION.

General anesthesia

Modern anesthesia is no longer comparable with the general anesthesia of 10-20 years ago. Generally our anesthesiologists use modern, safe, and balanced anesthesia. (Today it's not unusual for a breast augmentation patient, for example, to be shopping the day after the operation)

Before and after the operation

In order to ensure a smooth and problem-free treatment and healing period, there are several important things to consider during the weeks before and after the operation. We suggest reading the page ..."BEFORE AND AFTER". Individual detailed advice regarding post-surgical practices during the healing period depend on the type and extension of the operation and will be provided by our specialist personally, depending upon the individual case.

Preliminary investigation - Diagnostics

Before each operation a detailed questionnaire must be compiled.

- ... THE QUESTIONNAIRE

contains questions about your current health status, the medical history (past illnesses), consumption of medicines and more. If the surgery will require general anesthesia, preliminary diagnostics must be done. It is possible to have the diagnostics done at home by the family doctor or in a nearby ambulatory or diagnostic center. A list of the tests required can be printed out on our website

- ... "DIAGNOSTICS" (For opening: when your system requires a password, you may just leave it empty and simply close the box or click the cancel button)

The diagnostic results should be transmitted to our clinic via fax for a professional check. For patients who believe themselves to be in good health, it is possible to do the diagnostics after arrival in the internal diagnostic department of our clinic.

Liposuction

Power Assisted Lipoplasty - Power Cannula

Navigate

All topics

thin method

The "Rolls Royce" of Liposuction

The principle

Power Assisted Liposuction (also called Power Assisted Lipoplasty or Power Cannula) probably represents the important development in the area of fat removal technology. It is generally considered the soundest method with best results. Power assisted liposuction is in essence similar to ultrasound liposuction. It uses fine vibrations in order to liquify the fat before suctioning. However, Power assisted liposuction uses a mechanical vibrating cannula with a lower frequency than the one used in the Internal ultrasound lipoplasty. It dissolves fat tissue without any trauma, more gently and more effectively than any other method of liposuction and body liposculpture exist today.

The privileges

Due to the low frequency vibration of the cannula, the process of liposuction becomes easier, with gentle penetration of the cannula through the tissue. Even though the smallest existing cannula is used, the operation time is decisively reduced. The extremely small cannula leaves very small incisions (only 2-3mm). This procedure is also less painful and causes less bruising. Other benefits include less bleeding, a quicker and more comfortable recovery (no anesthesia impact) and more impressive results. Another important advantage of the low frequency liposuction is the fact that there is no heat generated by the cannula, so there is no risk of burning the skin (as opposed to the internal ultrasound liposuction). Thanks to the excellent technical characteristics of this method it is possible to carry out extensive sessions, while keeping the operational risks low. It is also the only method which allows super extensive sessions, with removal of up to 15 pounds of body fat within one session.

Safest operation and shortest operation time ever

During the procedure, the power cannula is moved by a small micro-engine in the handle, approximately 3mm and forth. The fine low frequency vibrations and rotation action of the cannula allows a careful separation of the fat tissue. The fat cells are effectively and safely dissolved and can be very easily sucked out. The motion is much gentler and the liquidizing of the fat is much more effective than with any other technique and thus prevents penetration of the cannula in the deeper layers, thereby avoiding unintentional injuries. The surgeon's work is more comfortable, with a reduction of 30-50 percent in operative time with an accordingly reduced stress on the organism.

Liposuction

[External Ultrasonic Liposuction](#)

[Navigate](#)

[All topics](#)

The external Ultrasonic method represents the latest development in the area of ultrasonic technology and is even more gentle than the classic or internal ultrasonic liposuction. The new method dissolves the fat cells from the outside in a non-invasive way, even before the gentle suction process begins. The energy is dosed so precisely that it works exclusively on fatty tissue. The risk of burns on the surrounding tissues is avoided.

External Ultrasonic Liposuction at a glance

Safe procedure

The fatty tissue is dissolved not mechanically but by ultrasonic energy on a noninvasive way. This enables a much safer and gentler procedure of fat removal and body liposculpture than with the classical liposuction methods, even than with the internal ultrasonic liposuction. Post-operative skin inequalities are even more minimized.

Minimized operational risks

Thanks to the new technology and the exact dosage of the energy, exclusively the fat cells are dissolved. The surrounding tissue remains completely safe. The risk of injury at the hypodermis is no longer existing.

More extensive operations are possible

The method allows the removal of larger quantities of fat during one session.

Smooth skin

The careful procedure of the external ultrasonic method leads to an enhanced post-operative skin retraction at the operated area. Therefore this method can ideally be applied even by older patients.

Ideal for sensible areas

The method extends the spectrum of the treated areas over in former times "not allowed" zones, as for example the front thigh surfaces. The range of application of the ultrasonic liposuction includes: Hips, abdomen, buttocks, thigh, calves, arms, chin, double chin, neck, knee, ankle.

Subject: RE: Liposuction

Dear Doug,

its Herbert from Aesthetia,

I spoke to the doctors / Dr Alawa/Dr Visek/and can now tell you what exactly they need to understand if you may undergo operation liposuction in the current situation.

Please, if you can make the following diagnostics:

blood test , APTT, Q, liver function test, respiration results, and from your doctor the declaration that there is no contraindication for an operation in general anesthesia. Also if you could send us some photos, via email for the doctors preliminary evaluation.

I choose Dr Visek as your doctors, because he is the most experienced of our docs and he use the power cannula method, which allows to remove more fat than any other method in one session, that is than called extensive liposuction. However, an extensive liposuction requires also a good health of the patient.

Therefore best would would be now, if you could make the tests and send us the documentation as email attachment or by fax to 00420296325061, then I will let you know soon the doctors answer.

Kind regards
Herbert

I am Herbert Pedron, owner of Aesthetia.

Thank you for your inquiry and detailed explanation, your story is quite unbelievable.

However, I will be clear and open with you. Our doctors are committed to clear directives as much as it regards the patients health. Liposuction operation is carried out under general anesthesia.

In order to make sure that you be able to undergo an operation in general anesthesia, some specific diagnostics have to be carried out. This diagnostics may be done by your home doctor or by yor current personal doctor who treats you and the results may be sent to us by fax for the control. If any data in the results are out of the tollerances, the operation will not be possible. If all the data are in line, the operation will be possible.

Regarding the prices for liposuction they start by 1500 Euro und go up to 4000 Euro depending on the extension and type of liposuction.

I give you the access data to the reserved area of our homepage, where you wil find all detailes

information about our staff, doctors, procedures, prices, locations.

http://www.pragueaestheticsurgery.com/protected_area.htm

Username: Plastic Surgery

Password: Aesthetia

Just let me know, if you like to proceed, and if I can help you more, in this case I would send you the list of the necessary diagnostics in order to check if your health status will allow us to operate you. Dont hesitate to send me your more questions.

Kind regards
Herbert Pedron
Aesthetia

Dear Herbert:

Please call me doug. Please do send me the list of diagnostics. I will get my primary care Doctor to arrange for them to be done.

My main concern is the sudden release of poisons contained in the fat, into my body. When I became poisoned the ingestion of toxins occurred over the period of a week.

I have been taking treatments to eliminate poisons, for 3 years ; such as, infrared sauna and chelatin (oral and intravenous).

Nevertheless the amount of lead is still at 627.9 nanograms per liter which is 5 times as much as any patient my specialist has treated during 15 years.

If I can get it out in a hurry and reduce the amount absorbed into the fatty tissue of my brain then I will be years ahead in overcoming a real hellish ordeal . Since, the poison is contained in the fat. It would be great for me to get as much fat out of my body as possible.

How much can be removed during one operation? I am concerned about toxins being reabsorbed if some fat is left behind.

My respiratory illnesses included: 1) 10 types of fungus populating my lungs from the flooded subways, 2 types of yeast from same, 2) WTC Cough, 3) restricted airway syndrome (my bronchial passages were enflamed almost shut), 4) extreme allergic reactions to solvents & smoke & vast variety of compounds that my body had ingested and 5) asthma like condition.

My respiratory system is now a million times better but I still have profound allergic reactions.

If I can stay conscious I believe my willpower is indestructible. Is this possible?

What are your doctors thoughts about these things?

I expect it is very unusual for someone to have cosmetic surgery to eliminate poisons.

thanks for your prompt response

doug copp

Subject: Medical Trip

Hello Doug,

Thank you for contacting us. Here is a package that might be helpful for your case:

- Gastric Bypass at the Alexander Fleming Institute
- Accommodations at the Cabildo Suites Apart Hotel (4 stars) – 7 nights
- Transfers to and from the airport and medical appointments
- Personal bilingual assistant for medical appointments

Total Price: U\$S 11700.-

If you are not interested in the bypass, you can have a full body liposuction, which will not limit what your body absorbs like the bypass. It will be helpful if you can send us some photos for the Doctor to analyze and recommend a treatment for your case.

This quotation does not include airfare.

The **Alexander Fleming Institute** has created the **Obesity Program**, continuing its experience in assistance, teaching and investigation in high complexity specialties. A team of professionals identified with the new modern medicine interdisciplinary concept puts into practice new integrated strategies for the treatment of obesity.

Surgeons specially trained at the Cleveland Clinic Foundation (www.clevelandclinic.org), form a multidisciplinary team of the highest international standards, where every patient receives the best treatment for his or her particular case. The ample experience obtained while working in the United States, with over 800 patients with different needs, guarantees responsibility and excellence in health care. Dr. Rosenthal, consulting professor of our medical team, is also director of the bariatric surgery program of the Cleveland Clinic of Miami.

Our medical team is specifically trained to carry out all the surgical procedures indicated for obesity, through the mini-invasive technique, accelerating significantly the postoperative recovery.

You can perform an Internet search on Plenitas so that you feel more confident about our company. We recently launched an important expansion campaign in the US due to the good experience our clients have been having with our services. We currently receive many patients from the US, Europe, Canada, Australia and other developed countries, and all of them return home more that satisfied. Some of them are even coming back for new surgeries.

Payment Terms:

This quotation is valid for 30 days, after that you will need to ask for a new one. To confirm price and reserve your surgery date we require a payment of 30% of the total package. You will receive an invoice for the total amount and a receipt for the down payment. The balance of the remaining 70% has to be paid 15 days prior to the trip. You may pay through a bank deposit or Western Union.

30/11/2004

Don't hesitate to contact us if you have any further doubts or concerns.

AESTHETIA

Information for the patient

you have decided to undergo a surgical procedure in which you will be provided with general or regional anesthesia, after that you will be able to leave our hospital very soon. All the medicines used for anesthesia in our clinic belong to the most modern and safest means which are applied worldwide. Thanks to these medicines, the recovery from the anesthesia is very fast.

Depending on individual requirements, different possibilities are given after stabilization on how to leave our clinic for the convalescence.

1. to leave the clinic on the day (or second day) after operation, for the home treatment.
2. we book the extended clinic stay for 2-4 days for the direct postoperative monitoring before you leave for home.
3. we arrange the additional stay of 8-14 days in the near accommodation with indirect monitoring, repeated checks, removal of stitches, and the final check before you leave for home.

In any case, but especially in the first case, it is recommended that you be escorted when you leave the clinic.

After an extensive operation the third version is generally recommended, eventually also the second version is possible, however, in such case our doctors require to make sure in advance that the family doctor will take over the regular checks and monitoring to assure the proper home treatment during the first 10-14 days.

Please note that it is important for your safety not to eat and drink at least 6 hours before the operation. If you take medications regularly, you should inform us. Our physician will let you know, which medicines do not represent any problem and which should not be taken in the period before and after the surgery. Smoking is prohibited on the day of the surgery, but should be reduced or possibly stopped for the period of 30 days prior and after the operation.

The evening before, you may use a sleeping pill. It is recommended to avoid any salicylates like Aspirin, Azytpryn, Anopryn, Aspro, Alnagon, Azykoffin, Defibrin, Harburettas, Neuralgen, for the period of at least two weeks and it is recommended to avoid any alcoholic beverages during the days and weeks before and after the appointment. Any alcoholic beverage may even strictly be avoided for 24 hours before and after the operation.

Before the operation please, do not use any make-up, clean your nails from any nail polish, do not wear contact lenses, teeth prothesis or hearing aids. Please bring your medical records, referral letter and your chronic medication (if necessary). It is essential for the anesthesiologist to know all your previous diseases, medical history, difficulties, drug use etc. Please complete the questionnaire.

It is not wise to arrive alone by car because the medication during anesthesia will disable you to drive until complete stabilization. Please, make sure some-one meets and escorts you home after the treatment, or plan a properly extended stay within or near to our clinic, with our Aesthetia management.

In the case of ambulatory treatment: After an ambulatory treatment, which takes place under local anesthesia, it is necessary to be accompanied by someone on your way home, and that you are not left alone - without private supervision for 12 hours after the surgery. During this time you may not drink alcoholic beverages and take medicines other than prescribed by our physicians. You should avoid risky activities and driving a car.

We thank you for your co-operation and wish you a pleasant stay in our Aesthetia clinic.

Team Aesthetia

ANESTHESIA QUESTIONNAIRE

Dear Mr./Mrs.,

Your safety plays a very important role for us. Before the operation in the clinic you will be required to fill out the medical questionnaire. In such case when the private consultation will be combined with the operation, you may send us the essential information about your health in advance. Please fill out the preliminary questionnaire below and inform us, if there are some indications that apply to you, especially in the case of

- regular consumption of medicines
- current or past illnesses, problems, chronic complains, allergy
- problems with anesthesia in connection with past operations
- possible pregnancy

You may fill out the questionnaire and send it back to us by e-mail to diagnostics@aesthetia.com or to send us the compiled printout via fax at 004202 96325061.

We thank you for your attention and appreciate your co-operation.

Tests Reveal Yushchenko's Dioxin Level

By EMMA ROSS, AP ONLINE

LONDON (AP) - New tests reveal the level of dioxin in the blood of Ukrainian presidential candidate Viktor Yushchenko is more than 6,000 times higher than normal, according to the expert analyzing the samples.

On the left, Ukraine's opposition leader Viktor Yushchenko is seen after he submitted his candidacy papers in the Ukrainian capital of Kiev on July 4. On the right, Yushchenko, with his face disfigured by illness, is seen at the presidential Mariinsky palace in Kiev on Dec. 6. (AP)

The concentration, about 100,000 units per gram of blood fat, is the second highest ever recorded, said Abraham Brouwer, professor of environmental toxicology at the Free University in Amsterdam, where blood samples taken last weekend in Vienna were sent for analysis.

A normal level of dioxin is between 15 and 45 units. Almost everyone has some level of dioxins because the toxic chemical is widespread in the environment - mainly from its industrial usages - and accumulates in the food chain.

In the case of Yushchenko, Brouwer's team has narrowed the search from more than 400 dioxins to about 29 and is confident they will identify the poison by week's end. That, in turn, could provide clues for the investigation of the alleged poisoning.

"From a (chemical) fingerprint, at least you can deduce what kind of sources might have been involved," Brouwer told The Associated Press. "The labs will ... try to find out whether it matches any of the batches of dioxins that are around, so that maybe you can trace it back to where it was ordered or where it came from."

Experts say Yushchenko, whose face has been pockmarked and disfigured, has probably experienced the worst effects already and should gradually recover, with no impairment to his working ability.

The reformist candidate, who faces Kremlin-backed Viktor Yanukovich in a repeat runoff on Dec. 26, first fell ill after having dinner with Ukrainian Security Service chief Ihor Smeshko and his deputy Volodymyr Satsyuk on Sept. 5. He reported having a headache about three hours after the dinner, and by the next day had developed an acute stomachache.

He later reported pancreatitis and gastrointestinal pain, as well as backache. He also suffered partial nerve paralysis in his face and an inflammation of one inner ear.

About three weeks after his first symptoms, he developed the rough, acne-like rash on his face which is the hallmark of dioxin poisoning.

"It was very late before the rash started to develop, so if he had died it would have been a mystery illness of his pancreas, his liver or his gut and they would have said maybe it's some

rare bug thing," said John Henry, a toxicologist at London's Imperial College. "He would have died within a few days and nobody would ever, ever have thought of dioxins."

Brouwer said the highest dioxin dose recorded so far was in a woman in Vienna, who was poisoned intentionally with dioxin in the mid-1990s. Tests showed her blood had 140,000 units per gram of fat and that didn't kill her.

"We don't actually know what the lethal dose is. The only thing we do know is there's a woman who had an even higher dose, who didn't die, so it must be higher than that," Brouwer said.

Most of what is known about the health effects of acute dioxin poisoning comes from experiments on animals. Most animals would die from the levels found in Yushchenko.

Evidence of the hazards of dioxin also comes from studies of long-term exposure, such as those who work in chemical factories, or from people involved in industrial accidents.

Studies suggest Yushchenko faces an increased risk of heart attack, cancer, diabetes, muscle aches and other less severe symptoms, but it is unclear how high that risk has risen from a single poisoning.

The disfiguring acne, while not harmful to his health, may persist for decades, experts say.

"It'll be a couple of years, and he will always be a bit pockmarked. After damage as heavy as that, I think he will not return to his film star looks," said Henry.

Dioxin, which settles in the body fat, lasts a long time in the body. Eliminating it quickly from Yushchenko's body would likely reduce his chances of long-term ill health. One possibility is a couple of courses of liposuction, a procedure that sucks the fat out of the body.

Another option being discussed by scientists is the use of olestra, a fake fat substance used in diet food that could act as a magnet to draw the poison out of the body fat into the gut for elimination. The technique has been proposed before for the elimination of other fat-soluble pollutants.
