

**Mental Health Services
CUMULATIVE THERAPEUTIC
RECORD**

Name: Douglas Copp
Case Number: 289266-5

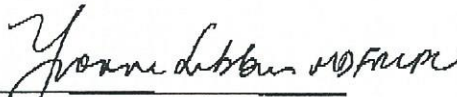

Date	
DS 28/09/06 DD 28/09/06 DT 23/10/06	<p>for his rescues and Dr. Boucher confirmed that Dateline NBC has actually been to the clinic to interview him and that this patient is involved with a multi-million dollar law suit against Mr. Lang. Contact was attempted to be made with Dr. Tim Smith, a specialist in California. We were able to reach the office but not able to make direct contact with Dr. Smith so I don't have access to that medical history but Dr. Boucher was able to confirm that this man does indeed suffer from toxicities and was able to list off seven toxicities that are present in his urine which are well above the average, including lead.</p> <p>On the second visit, Mr. Copp was pleased to say that he is feeling some relief and that he has found having contact with the Mental Health Clinic has been helpful to him.</p> <p>The Diagnostic Impression at this point in time is somewhat unclear still. The psychiatric symptoms that he is reporting include perhaps normal reactions to feeling in a very stressful situation. It is too early I think at this time to diagnose him with a major psychiatric illness and the best I think is to consider an Adjustment Disorder but at this point it warrants that this man be followed and further assessed in our clinic. It certainly was obvious that Mr. Copp felt appreciative of being able to discuss his worries and his concerns. He certainly talked about the difficulties in his relationship and the stressful situation he has found himself in has caused some stress in their marriage.</p> <p>Recommendations: At this point in time, I think it is important to continue to follow Mr. Copp in the community. He appreciated the time that was offered to him and a card was given to him in order for him to call the clinic back when he is ready to sit with us and discuss further what mental health care he may need. He reported that it actually has been helpful just to take some time to address his own emotional needs which he feels has probably been neglected because he has been under so much stress just to survive for the last several years. I reported at this time that he still is in an assessment phase so there is no clear diagnosis from a psychiatric point of view but it certainly warrants following this man over time just to get a clearer picture if there is any mental health disorder, that we follow it and monitor him for the feelings of stress that he is finding himself in. I also discussed the importance of addressing the support in his life which is his relationship with his wife and encouraged that it is important that he takes time to nurture this relationship. Practical information was provided to him in the office. It was encouraged that he bring his life in for a visit here and he reported that he would be open to doing that perhaps after meeting for another time here in the clinic.</p> <p>At this point in time, I will await to hear from Mr. Copp when he would like to meet again as</p>

August 14, 2006.

Dear Dr Ben Boucher//copied to Dr Tim Smith:

As usual, I am preparing a medical condition/symptom report for you between office appointments. Since, you have been on vacation, this time period has been longer than usual.

As you know I have been very sick; since, I attempted to visit New York, in June. My condition has not improved, as expected. I have been very sick and have had 2 attacks; since, returning from that trip.

My symptoms have been multiple and simultaneous, for most of this time.

They are: 1) multiple severe headaches, 2) ear infections and sores, 3) fresh blood discharge from rectum, 4) sinus congestion and sinus squeeze, 5) aching joints, 6) open sores on hands, 7) dry eyes, frequent blurred vision 8) chest pain, 9) heavy labored breathing without exertion and after reclining, 10) coughing fits, 11) heavy nasal discharge, 12) 'sickly' exhaustion without any apparent cause and feeling 'faint', 13) upset stomach, cramps, feeling like vomiting, 14) my fingers, hands, wrists and forearms have been very sore and aching, 15) memory problems (worse than usual), 16) speech problems like 'stuttering', 18) 'drifting away', inability to focus, 19) frustration, 'tired of being sick', feeling overwhelmed.

I had an appointment with Dr Tim Smith, last week, he helped me a lot and arranged for me to have 5 more medications in addition to my existing prescriptions: 1) lithium (repair damaged brain cells), 2) ciprio (antibiotic for infection), 3) mastica (to help control acid reflux disease bacteria), 4) chlorella (to help control acid reflux disease in conjunction with prilosec prescription), 5) Omnicoline.

I have felt overwhelmed and miserable most of the time. Normally a trip to the country for a few days allows me to breathe easy again. For the last 2 months this has not helped. I am routinely 'gasping' for air.

Out of frustration, I took an EDTA suppository and went to bed. The next morning, this had dramatic effects:

- 1) I had cluster headaches of 5 major and extremely severe headaches simultaneously. The pain, lasting for more than a day, was so bad that water was running out of my eyes. I wasn't crying but people would think I was, to look at me. I felt like banging my head against the wall.
- 2) For the first 10-15 minutes after I got out of bed my vision was slightly blurred and I could only see in shades of gray. I stumbled around the house. I could not see any colors.

After 15 minutes my vision remained blurred but I could see in color.

3) Paulina says that my hands broke out in sores the next morning because she saw

Monday, August 14, 2006 America Online

me look at my hands and say: " Look , my hands broke out, again".

Yesterday, and the day before, I spent most of the day sleeping or resting without the energy to get up.

I had the respiratory 'work-up' while you were gone. The nurse asked me six times if I wanted to stop. I felt like a man with a broken leg being whipped to see how far he could run without collapsing. I doggedly continued. I completed all the tests except the 'panting'. I just couldn't do it. I felt like a drowning man trying to breathe water. She had me rest to regain my breath between individual sub-tests. I was hyperventilating and gasping for breath. This was very difficult.

I have an appointment for a cat scan, tomorrow. This has been a very difficult time, with little reprieve. I feel like shit.

Ciao
doug

as patient is here in the office for an App

MEDICAL LOG
Doug Copp
March 14th to March 28th

March 14th, 2006

Doug had a Sauna and had a Glutathione treatment at home as prescribed. The Glutathione was expired. He took it to save some money, as it costs \$75⁰⁰. Afterwards, he had a severe acid reflux disease, severe joint and muscle pain. He felt really exhausted and had a very bad headache. His chest hurt and he felt disoriented. He felt concerned because he felt like he might die through the night. He had a sense of dying and he had to get and exert his will not to die.

March 15th, 2006

Felt sick all day. He had an appointment with Dr. Boucher to get his IV treatment. Doug's veins were collapsed and it was almost impossible to get any treatment.

March 16th to March 18th, 2006

Very sick and felt exhausted. Sore muscles. Hand breakout continues to be severe.

March 19th and March 20th, 2006

He started to feel better. Felt a lot more energetic.

March 21st, 2006

Doug memory problems are persistent. He cannot remember things that happened 6 months ago. He started to have a sudden sharp pain in his back due to lifting his arms up. It was almost as bad as when we had to take him to the hospital.

March 22 and March 23, 2006

Doug feels tired, sore and continues having severe back pain.

March 24th, 2006

Back pain continues for the 3rd day. Feels tired and sore. At the gas station, there was a strong gasoline smell. He immediately started feeling dizzy and disoriented. His speech became delayed and broken.

March 25th to March 28th, 2006

Doug continues feeling very sick with the following symptoms: exhaustion, back pain, hands breakout, memory problems. His thumb is cracked open where it bends and it looks infected.

March 1, 2006

Karasik & Associates
28 West 36th Street, Suite 901
New York, NY 10018

Dear Mr. Karasik:

Re: Doug Copp

This letter is to summarize Mr. Doug Copp's presentation to my medical office, his pre-exposure health status and his present condition. I will also comment on an interview I had with Mr. Ramirez, NBC Dateline.

Doug Copp, date of birth August 3, 1951, presented to my office in Port Hawkesbury, Nova Scotia on October 2, 2003. His history was that he was on a rescue mission at the World Trade Centre starting on September 13, 2001 and lasting for eleven days subsequently. Mr. Copp was looking for trapped victims six levels below ground zero. He was exposed to a vast array of toxic fumes, gases and dust for the duration of his mission. During the rescue efforts, he injured his back. Included in his medical reports are three surgical procedures he underwent to reduce the pain and partial paralysis. He has had recurrent low back pain since. Also, shortly after beginning his rescue efforts, he began to have severe shortness of breath and burning chest pain on inspiration. These symptoms became more severe as his rescue efforts continued. He also experienced persistent, severe weakness; shortness of breath after walking more than ten feet; constant and severe headaches; occasional vomiting and diarrhea; generalized severe joint pain; poor short term memory; difficulty maintaining train of thought; depressed mood and irritability; and poor concentration.

In January 2002, Mr. Copp was diagnosed with hypothyroidism (underactive thyroid gland) by Dr. Garcia, New Mexico. He was started on Synthroid 0.05mg and this has been monitored. Following Dr. Garcia, Dr. Tim Smith became his primary care physician and he oversaw several hospitalizations as well as consultations by numerous doctors with subsequent numerous investigations and treatments. I received and reviewed chart material from Dr. Smith. I agreed with his treatment approach and essentially continued same for Mr. Copp's detoxification. He had also been treated by Dr. Friedman beginning in October 2002 with therapies to treat his metal toxicities, fungal infection and decreased immune status. Previous to visiting my office, Dr. K. Biswas also saw him for several intravenous infusions of various immune supportive antioxidants to further boost his immune system.

Karasik & Associates
March 1, 2006
Re: Doug Copp

On a trip to Wales in the spring of 2003, he felt slightly better near ocean air and decided to move to Cape Breton, Nova Scotia, Canada to be near fresh and unpolluted air. This was to help decrease the number and severity of his respiratory attacks. Mr. Copp's respiratory condition has improved since his move to this environment.

The complaints described in a previous paragraph were still essentially all present at the time of his presentation to my office on October 2, 2003 except that he was able to walk up to fifty feet before becoming short of breath. On examination, his blood pressure was 130/90, he had decreased air entry/exit over both lung fields; he had to frequently gather his thoughts to continue conversation and his conversation was interrupted by a persistent headache.

On July 13, 2004, Mr. Copp had a provocative challenge test for toxic metals. His pre-challenge urine analysis indicated high levels of lead, arsenic, aluminum, cadmium, thallium, antimony, barium, and beryllium. After an intravenous infusion of EDTA 1.5 grams, he had elevated levels of lead, cadmium, thallium, antimony and uranium. The most notable toxic metal was lead which was the highest (both pre and post challenge) I have had reported in 15 years of toxic metal analysis. Please see accompanying pre and post urine metal analyses reports. The individual and cumulative/synergistic effects of these very toxic metals contributed to his severe medical condition. The details of these and other toxicities can be found in the submission to the Victim's Compensation Fund by Dr. Tim Smith (20 pages). The treatment is also outlined in that presentation.

Mr. Copp is presently being treated for his toxic exposures with infrared saunas, niacin and intravenous immune enhancement. The later consists of recognized environmental illness treatment using a standard Myers cocktail formula. Glutathione is also used for toxic metal binding. These treatments are given on a weekly basis.

Doug Copp had a routine physical in May 2000 for the Kaiser Permanente Company. At that time, Dr. Michael Tran reported a physical exam that was within normal limits. His blood pressure was 158/78, pulse 68. He had baseline laboratory studies, which indicated no signs of infection, normal kidney function, normal thyroid function, normal cholesterol, and normal blood sugar.

It is my assertion, based on the medical evidence, that previous to September 11, 2001, Mr. Copp was in relatively good health, had excellent endurance, hardly ever had any colds or flues and never experienced headaches. This assertion is based on his history, doctor's examination and screening tests. His present poor health is solely as a result of his metal and other toxic exposure, at the burnt and collapsed World Trade Centre rescue effort, which caused immediate and lasting deleterious affects, which are present to this day.

At a conference of the American Academy of Environmental Medicine that I attended in West Virginia in 2002, Dr. Frederica Perera, from New York city, gave a presentation. In her preamble, she commented that the exposure of thousands of people in Manhattan as a result of the World Trade Centre explosions would likely have serious immediate consequences for those in close contact. She also felt that chronic exposure from persistent dusts in and around buildings of the Manhattan area would also likely result in future illnesses. Apparently, this has proven true with rescuers such as Mr. Copp and others having experienced immediate and lasting ill health.

Karasik & Associates
March 1, 2006
Re: Doug Copp

On October 7, 2004, Rainer Ramirez, NBC Dateline spent two hours at my office in Port Hawkesbury, Nova Scotia, Canada interviewing Mr. Copp and myself. I would like to point out that Mr. Copp was receiving an intravenous treatment on the same day of the interview with Mr. Ramirez. On that day, he had an "attack". Mr. Copp's medical reports indicate that he had these "attacks" and I had previously witnessed two in my office. This particular incident consisted of weakness, severe headache, difficulty concentrating and he certainly appeared distressed, pale and somewhat disoriented. On examination, Mr. Copp's blood pressure was 160/94, pulse 96 and respiratory rate 24/minute. Mr. Copp's attack was very apparent on this occasion and was witnessed by myself, Mr. Ramirez and his technicians. The technicians voiced concern after the "attack" regarding Mr. Copp's health at that time.

With respect to the interview that I had with Mr. Ramirez of NBC Dateline, I was suspicious of his motives from the beginning. He was vague and made negative comments about Mr. Copp when I asked what the interview was about. I also am aware of the fact that although the interview lasted for approximately 45 minutes and I provided considerable detail as to Mr. Copp's presentation, investigations, and treatment that none of this material was presented in the aired broadcast. NBC Dateline's presentation of Mr. Copp's medical condition was completely misrepresented and maliciously untrue.

I hope this information is beneficial to you and your client and I would be pleased to discuss it further if required.

Yours truly,

Dr. C. Benjamin Boucher, BSc, MD

LAB. RES <SHIFT-19> FOR COMPLETE LAB RESULTS

HAYWARD 01/05/05 09:30

**Medical Log
Doug Copp**

January 2 to January 6, 2006

Acid reflux. Trouble sleeping at night. Chest pain.

January 7, 2006

Acid Reflux. Ear blocked with sinus infection. Trouble sleeping and breathing. A lot of memory problems. Misplaces things. Doug put engine antifreeze in wind chill washer reservoir.

January 8, 2006

Acid Reflux. Extremely tired. Sore in all joints and muscles. Arms and wrists throbbing with pain. Chest pain. Earache and toothache on right side. Headache. Right side eye hurting. Doug started noticing the outbreak on his hand reappearing.

January 9, 2006

Acid Reflux Disease. He could not sleep at all. He feels extremely hot and air is stale and dry. Trouble breathing with sinus path blocked. Doug would like to know why he feels so hot all the time.

January 10, 2006

Acid Reflux. Chest pain.

**Medical Log
Doug Copp**

Dec 26th 2005

Acid Reflux, Earaches. Chest pain and wheezing. Unable to sleep

Dec 27th 2005

Acid Reflux. Chest pain and wheezing. Unable to sleep. Doug felt too sick to be able to go to a Christmas party at night.

Dec 28th 2005

Acid Reflux Disease. Felt like vomiting. Very tired. Chest pain and wheezing. Unable to sleep.

Dec 29th 2005

Acid Reflux. Chest pain and wheezing. Doug realized he had been exposed to cigarette smoke. We rent the 3rd floor and part of the 2nd floor of our house to couple from the university. When they first arrived to the house, they were made aware in writing that they could not smoke in the house. They ignored the signed agreement, and regardless, smoked on the 3rd floor. When Doug went upstairs on December 26th to check a water leak, he immediately reacted to the contaminated environment.

Dec 30th 2005

We had the 3rd floor ventilated and gave the couple an ultimatum stating there was absolutely no smoking in the house. They decided to vacate the house in 2 weeks, stating that it was too inconvenient for them to go out to smoke.

Dec 31, 2005

Acid Reflux. Doug was unable to sleep due to food poisoning symptoms. Chest pain.

January 2nd 2006

Acid Reflux. Doug started to feel better.

**Medical Log
Doug Copp**

Dec 15th, 2005

Last day of HP pack. Doug started to have acid reflux symptoms right away.

Dec 16th to Dec 22nd, 2005

Acid Reflux, earaches.

Dec 19th & Dec 20th, 2005

Doug was very tired in the evening. He could not help falling asleep while watching TV.

**Medical Log
Doug Copp**

Nov 30th, 2005

Antibiotic: Iprofloxacin 500 mg ran out yesterday. Vision is very blurry and headache returned. Small ear ache, not as bad as before.
Started HP Pack and Domperidome 10 mg.

Dec 10th, 2005

Doug was tired in the evening.

Dec 13th, 2005

Spoke with Dr. Tim Smith. Reviewed medications and made some recommendations: D/C Dompirodome, as it counteracts with Prevacid. He recommended other supplements such as Acidophilus, and Calcium Gluterate and increased dosage of Mastica. Dr. Smith expects, the symptoms to reoccur after Doug stops the HP pack of antibiotics.

The purpose of taking Acidophilus is to increase the flora in the colon to aide digestion and help the immune system.

The Mastica, is a natural antibiotic that does not damage the intestinal flora, like the HP pack antibiotics do.

Doug showed a significant improvement during this last period. He has not complained about Acid Reflux, after starting the HP Pack. His overall health, seems better.

Dr. Charles Benjamin Boucher, BSc, MD

December 12, 2005

Karasik & Associates
28 West 36th Street, Suite 901
New York, NY 10018

Dear Mr. Karasik:

Re: Doug Copp

This letter is to confirm that previous to September 11, 2001, Mr. Copp was in good health, had excellent endurance, hardly ever had any colds or flus, and never experienced headaches. In 1999 and 2000, he had screening tests which were all within normal limits.

Since September 11, 2001, Mr. Copp has persistent, severe weakness; Dyspnea after walking more than ten minutes; constant and severe headaches; occasional vomiting and diarrhea; generalized severe joint pain; poor short term memory; difficulty maintaining train of thought; depressed mood and irritability; and poor concentration. These symptoms have waxed and waned over the past several years. He has also developed a thyroid dysfunction and requires Synthroid 0.05 mg daily.

On July 13, 2004, Mr. Copp had a provocative challenge test for toxic metals. His pre challenge urine analysis indicated high levels of lead, arsenic, aluminum, cadmium, thallium, antimony, barium, and beryllium. After an intravenous infusion of EDTA 1.5g, he had elevated levels of lead, cadmium, thallium, antimony, and uranium. The increase in his urine lead level was the highest I have recorded in fifteen years of toxic metal analysis. Unfortunately, Mr. Copp is unable to partake in standard metal detoxification due to the toxic effects of mobilizing his severe lead storage.

I hope this information is beneficial to you and your client and I would be pleased to provide further information if required.

Yours truly,

Dr. C. Benjamin Boucher, BSc, MD

To Whom It May Concern

Re: Doug Copp

Doug Copp has been my patient for 1-½ years. I have been treating Mr. Copp for medical problems arising from his work at the World Trade Centre. Mr. Copp became poisoned while searching for victims below ground zero. The list of metals, toxins, chemicals, compounds and solvents Mr. Copp ingested is vast.

A primary concern of the toxins he has ingested is lead. Recent lab tests indicate that Mr. Copp, even after three years of treatment continues to have 628nmol/liter lead in provoked urine.

During my 15 years of assessment and treatment I have never experienced a patient with this amount of lead on urine analysis.

Mr. Copp remains very disabled from his World Trade Centre toxicity. I expect that it will take many weekly intravenous treatments to remove the toxic metals, especially lead from Mr. Copp.

Mr. Copp is undertaking to have an independent surgical procedure to remove fat from his body. The fat in his body is a storage area for solvents, chemical compounds, particles and toxins absorbed by his body. This procedure is risky. I have explained to him that the sudden release of numerous toxins absorbed into his body over the two weeks work at the World Trade Centre, could have very serious consequences. Mr. Copp is determined to take this procedure and initial recovery period, he then will be required to continue the weekly intravenous treatments, to remove the lead stored in his brain and his skeletal structure.

Mr. Copp's symptoms have included substantial memory loss, disorientation and cognitive disorders. As the level of toxins rise and fall in his brain due to medical treatment, his cognitive disorder becomes more pronounced. Mr. Copp became a very sick man as a result of his exposures at the World Trade Centre.

Sincerely,

Dr. C. B. Boucher

EXPLANATION OF LAB RESULTS

An explanation of laboratory tests is provided below. Minor abnormalities of test results are not unusual and are likely to represent individual or lab variations. Abnormalities are subject to the interpretation of your health care provider.

The sed rate (Westergren ESR) is a nonspecific test of inflammation in the body.

White Cells (WBC) is a screen for the presence of infection or inflammation in the body.

RBC (Red Blood Cell count) is a test for anemia.

Hemoglobin is a test for anemia.

Hematocrit is a test for anemia.

MCV (Mean Corpuscular Volume) is a test to measure the size of red blood cells.

Platelets are one measurement of how well blood clots.

EXPLANATION OF LAB RESULTS

An explanation of laboratory tests is provided below. Minor abnormalities of test results are not unusual and are likely to represent individual or lab variations. Abnormalities are subject to the interpretation of your health care provider.

Cholesterol represents 1 of many risk factors for heart disease. A desirable number is less than 240 mg%.

Creatinine (CREAT) measures kidney function.

Glucose-random is a screen for diabetes--high sugar in the blood after having eaten food within 8 hours.

HDL (high density lipoprotein) is a measure of good cholesterol. High HDL is good for your heart.

TSH (thyroid stimulating hormone) measures thyroid activity. A high number indicates an underactive thyroid. A low number indicates either an overactive thyroid or too much thyroid replacement is being taken.

White Cells (WBC) is a screen for the presence of infection or inflammation in the body.

RBC (Red Blood Cell count) is a test for anemia.

Hemoglobin is a test for anemia.

Hematocrit is a test for anemia.

MCV (Mean Corpuscular Volume) is a test to measure the size of red blood cells.
